Correction: In the report, "Effects of parathyroidectomy on induced renal failure in dogs," by Delmar R. Finco et al (Vol 58, No. 2, pp 188-195), Figures 3 and 4 are incorrect. The correction versions are printed below. The printer of the *AJVR* regrets the error.

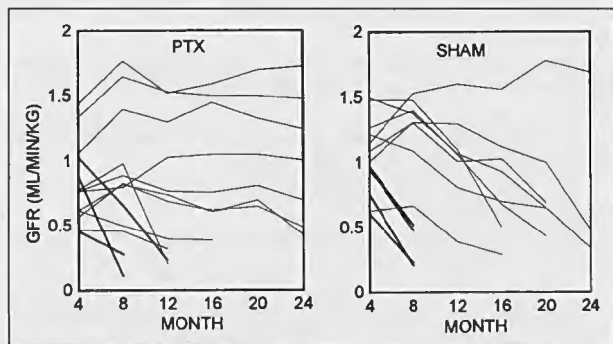

Figure 3—Glomerular filtration rate (GFR) in dogs of the PTX and sham groups between 4 and 24 months. Fatalities in both groups had a decrease in GFR with time. Some dogs, particularly those in the PTX group, had stable GFR values over 24 months.

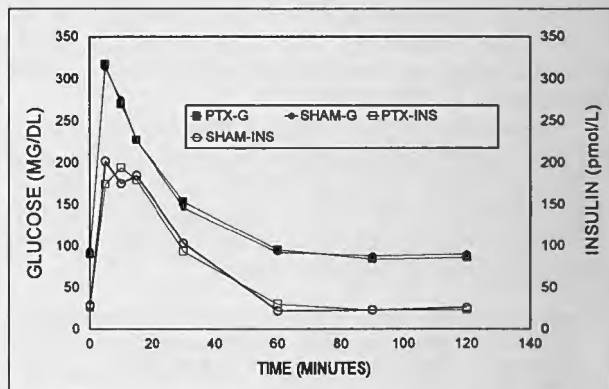

Figure 4—Mean values for blood glucose concentration and insulin response in PTX and sham dogs after IV administration of glucose. Both PTX and sham groups had normal glucose and insulin response curves.
