Correction: In “Serologic evidence of vesivirus-specific antibodies associated with abortion in horses,” published June 2006 (*Am J Vet Res* 2006;67:1033-1039), the first 3 sentences of the first paragraph on page 1033 provided misleading information. The information should be as follows:

Abortions and stillbirths cause severe economic loss to the equine industry, and approximately one third (25% to 45%) of these losses are reportedly caused by infectious agents.¹⁻³
