

Correction: Algal dermatitis in cichlids

In “Algal dermatitis in cichlids” (*JAVMA* 2002;220:1353–1358) the last lines of the legends for Figures 7 and 8 (p 1356) were inadvertently omitted. The complete legends appear below.

Figure 7—Photomicrograph of dermal granuloma from an infected red morph cichlid. Notice pink-stained algal cells (*Scenedesmus* spp; arrowheads). Acid-fast bacillus stain; bar = 10 μ m.

Figure 8—Photomicrograph of dermal granuloma from an infected red morph cichlid. Algal (*Scenedesmus* spp) cell walls and pyrenoids (P) stain positive. Periodic acid-Schiff stain; bar = 10 μ m.
