Correction: Association of periodontal disease, oral procedures, and other clinical findings with bacterial endocarditis in dogs

In the article “Association of periodontal disease, oral procedures, and other clinical findings with bacterial endocarditis in dogs” (*JAVMA* 2009;234:100–107), values in Table 2 for number of control dogs with evidence of immunosuppression and number of control dogs with neoplasia were inadvertently switched. There were 11 (14%) control dogs with evidence of immunosuppression, and 10 (13%) control dogs with neoplasia.
