

**Supplementary Figure S1**—Nucleotide positions of the primers and probes for a quantitative PCR (qPCR) assay for *Streptococcus suis* (designated as the qPCR<sub>SS</sub> assay) and a qPCR assay for *Streptococcus parasuis* (designated as the qPCR<sub>SP</sub> assay). The large white arrow indicates the whole stretch of *recN*, and small black and gray arrows in the enlarged view indicate the primers and probes of qPCR<sub>SS</sub> and qPCR<sub>SP</sub>, respectively. In 1,662 bp of the *recN* of *S. suis* NCTC 10234<sup>T</sup>, nucleotide positions for both ends of each primer and probe are shown as the numbers below the arrow.
