

Supplementary Figure S2—Scatter dot plot of individual data and mean \pm SD of body weights at baseline (1 day prior to treatment start; week 0), the end of each dosing week (weeks 1 to 4), and the end of follow-up (week 5 – no dosing) for the dogs of Figure S1. The central horizontal line crossing the SD bars depicts the mean. *Represents a significant ($P < 0.01$) difference between the 1-, 2-, and 4-mg/kg groups relative to placebo in mean change in body weight from week 0 to week 4.
