

**Supplementary Table S1**—Earlier date (January – March 2019) postmortem lesions seen in southern pig-tailed macaques that were part of the same shipment but no longer available for inclusion in case 4 testing.

Animal Number	Testing performed	Gross necropsy lesions: Granulomatous ranging from pinpoint to 2 cm							Histological lesions
		Lung	Liver	Spleen	LN	OM	Kidney	MS	
PT-1	TST suspect; T-spot negative (ref lab)	+	+	+	+	-	-	-	Consistent for Mycobacteriosis
PT-2	TST negative	+	+	+	-	+	+	-	Acid fast positive-smear, no Mycobacterium
PT-3	TST positive; PCR positive spleen	+	+	+	-	-	-	+	Consistent for Mycobacteriosis
PT-4	TST positive	-	+	-	-	-	-	-	Histology -lesions not suggestive of mycobacteriosis
PT-5	TST negative; PCR positive; Culture positive	+	+	+	-	-	-	-	Consistent with mycobacteriosis; Consistent with MTBC (Ames, IA)
PT-6	TST negative	+	-	-	-	-	-	-	Not done

LN=mesenteric lymph nodes

OM=omentum

MS=mediastinum

TST=tuberculin skin test
