Supplementary Appendix S8—In vitro determination of apoptosis. Unstained cells (red) are considered as viable cells. Annexin V positive and propidium iodide (PI) negative cells (blue) were considered as cells undergoing apoptosis. Annexin V negative and PI positive cells were considered as dead cells and excluded from the analysis. LxA4: lipoxin A4; RvD1: resolvin D1; RvE1: resolvin E1; PMA: Phorbol myristate acetate
