Supplementary Figure 2—Vertebral left atrial size (VLAS) measurement for the assessment of left atrial enlargement in the right lateral thoracic radiograph. A line was drawn from the center of the most ventral aspect of the carina to the caudal border of the LA, where it intersected with the dorsal border of the caudal vena cava. The equal length of the line was repositioned over the thoracic vertebrae, caudal to the cranial border of the fourth thoracic vertebrae, parallel to the vertebral canal. The VLAS was described in vertebral body units.
