Supplemental Figure 1. Scatter plot of post-transfusion serum concentrations of C1q versus pre-transfusion concentrations from 205 foals from 2 farms in New York that were born between January 13, 2022 and May 30, 2022 and that were administered R. equi hyperimmune plasma intravenously. Pre- and post-transfusion concentrations of C1q were highly correlated (\( r = 0.87; P < 0.0001 \)).
