

Supplementary Figure S1—Correlation matrices (heatmaps) illustrating the results of Spearman correlation analysis for CT-evaluated variables (abnormalities of the teeth and related anatomic structures) in 100 domestic rabbits (*Oryctolagus cuniculus*) in a study to characterize the CT findings and epidemiologic features of acquired dental disease in this species. A—Graphic depicting Spearman correlation (r_s) values. Gray-shaded cells represent data for which correlation could not be determined owing to missing values. B—Graphic depicting P values (after Bonferroni adjustment) for the correlations in panel A. Unshaded (white) cells represent nonsignificant ($P \geq 0.05$) correlations.
