

Supplementary Appendix S2—Practical tests for experiments 1 and 2.

Experiment #1: Palmar Metacarpal Ultrasonography	Experiment #2: FLASH
Obtain and save the following images:	Obtain and save an image of each of the 7 standard views of FLASH:
1. Transverse image of the superficial digital flexor tendon 8 cm distal to the accessory carpal bone = zone 1A.	1. Nephrosplenic window
2. Transverse image of the deep digital flexor tendon at the level of the proximal sesamoid bones (30-32 cm distal to accessory carpal bone) = zone 3C.	2. Gastric window
3. Transverse and matching longitudinal image (mutually perpendicular) of the origin of the suspensory ligament.	3. Ventral abdomen
4. Transverse and matching longitudinal image (mutually perpendicular) of the insertion of the lateral branch of the suspensory ligament.	4. Left middle third window
5. Transverse image of the inferior check ligament near its insertion in the deep digital flexor tendon = zone 2B.	5. Duodenal window
	6. Right middle third window
	7. Ventral thorax
