

Supplementary Table S2—Two diagnostic methods, real-time quantitative PCR (RT-PCR) and virus neutralization (VN), are used to detect active (RT-PCR) or past (VN) SARS-CoV-2 infections in companion animals. A companion animal must test positive by at least one of these two diagnostic methods to be confirmed positive for SARS-CoV-2.

RT-PCR Results	VN Results			
	Positive	Negative	Inconclusive	Unknown
Positive	46	2	0	65
Negative	66	0	0	0
Inconclusive	1	0	0	0
Unknown	24	0	0	0
