Supplementary Figure S4—Graphical abstract of the study.

Findings:

- Veterinarians are an important frontline group with respect to zoonotic diseases.
- Lack of communication between veterinarians, physicians & public health agencies.
- Non-standardized infection control measures puts veterinarians at risk for zoonoses.
- Our study results can help fill gaps & assist veterinarians in combating zoonotic diseases.
- Veterinarians lack knowledge and access to updated information on zoonoses.
- Gaps in communication on zoonoses between veterinarians & clients.
- Climate change impacts can increase transmission of zoonotic & vector-borne diseases.
- Veterinarians’ knowledge & practices are critical to combat zoonotic & vector-borne diseases.
