

Supplementary Table S1—List of non-neoplastic medical reasons that dogs (n = 21) were excluded from the VACCS trial. If blood work abnormalities were noted at the screening visit, dogs were eligible for enrollment if abnormalities had resolved at recheck in 4 to 6 weeks.

Condition	Frequency (%)
Azotemia, serum creatinine >ULN	8 (38%)
ALT >2x ULN	7 (33%)
Heart disease	2 (9.5%)
Neutropenia (<2000 cells/ul)	2 (9.5%)
Thrombocytopenia (<125,000/ul)	1 (4.8%)
ALP >2x ULN*	1 (4.8%)

ALP, alkaline phosphatase; ALT, alanine transaminase; ULN, upper limit of normal

* This dog met inclusion criteria and was inappropriately excluded.
