Supplementary Figure 3. Equine tenocytes express genes associated with tendon homeostasis including transcription factors SCX and MKX and extracellular matrix genes BGN, DCN, TNC, COL1A1, COL1A2, and COL3A1 with minimal expression of cartilage-like COL2A1. Normalized mRNA counts in tenocytes represented as violin
plots showing three tenocyte donors: horse 7 (blue), horse 8 (orange), and horse 9 (purple).
