Supplementary Figure S1—Spaghetti plot illustrating temporal changes in serum C-reactive protein (CRP, A) and haptoglobin (B) in 5 dogs with pulmonary coccidioidomycosis that had an increase in CRP or haptoglobin from baseline to the 3-month examination. Time points designated as baseline (T0), 3-month (T1), 6-month (T2), 9-month (T3), and 12-month (T4). Solid black horizontal line represents median. Dashed horizontal lines at the upper limit of normal, 3.9 mg/L (A) and 250 mg/dL (B). Enclosed circles represent individual dog data.
